Professional Summary

AWS Certified DevOps Engineer with 4+ years of experience designing, deploying, and operating secure, scalable cloud platforms primarily on AWS, with working experience on Azure.

Specialized in Kubernetes (EKS), serverless architectures (Lambda, Functions), CI/CD automation, Terraform, CloudFormation, Cloud Security, High Availability, Disaster Recovery, FinOps, Observability (SLO/SLI), and DevSecOps for production-grade SaaS and enterprise workloads. Proven impact in performance optimization, reliable large-scale deployments, and cross-team mentoring.

Certifications

- AWS Certified Solutions Architect – Associate (2023–2026)
- AWS Certified Cloud Practitioner (2023–2026)
- AWS Educate Badges: Serverless, Security, Networking, Databases

Technical Skills

Cloud Platforms

- AWS: EKS, ECS, Lambda, EC2, VPC, S3, RDS, DynamoDB, Aurora, Redshift, OpenSearch, CloudFront, IAM, KMS, WAF, GuardDuty, Step Functions, EventBridge, CloudWatch, SageMaker, Bedrock
- Azure: Virtual Machines, App Service, Azure Functions, Blob Storage, Cosmos DB, Key Vault, Azure DevOps, Azure Monitor

DevOps & Infrastructure as Code

- Terraform, CloudFormation, AWS SAM, Serverless Framework
- CI/CD: GitHub Actions, AWS CodePipeline, CodeBuild, CodeDeploy, Jenkins, Azure DevOps Pipelines, ArgoCD

Containers & Observability

- Docker, Kubernetes, Helm

- Monitoring & Logging: CloudWatch, Prometheus, Grafana, OpenSearch/ELK, Datadog, New Relic, SLO/SLI tracking

Scripting & Security

- Bash, Python, PowerShell
- IAM least privilege, secrets management, encryption, DevSecOps fundamentals, ISO 27001 support

Professional Experience

DevOps Engineer

Xperion | Oct 2025 – Present

- Operate and scale enterprise-grade microservices platforms on AWS EKS supporting business-critical production workloads.
- Extend core platforms with AI/ML capabilities using ECS (GPU workloads), serverless services, and managed AI offerings.
- Provision and manage multi-environment AWS infrastructure using Terraform and CloudFormation.
- Design and optimize CI/CD pipelines for applications and AI/ML model releases with automated validation, security checks, rollback strategies, and DevSecOps compliance.
- Build cloud-native data platforms using S3 data lakes, Redshift, Athena, and OpenSearch.
- Integrate Amazon SageMaker and Bedrock for model lifecycle management and AI-powered features.
- Ensure system reliability, high availability, and observability through centralized logging, metrics, alerting, and SLO/SLI tracking.
- Enforce security, governance, and FinOps best practices across IAM, encryption, secrets management, and cost controls.

DevOps Engineer (Progressed from Junior to Senior)

Softoo | Jan 2022 – Oct 2025

- Designed and operated AWS-based cloud platforms using ECS, Lambda, API Gateway, RDS, DynamoDB, and S3.
- Built and maintained CI/CD pipelines with GitHub Actions, AWS CodePipeline, and Azure DevOps, reducing deployment time by up to 70%.

- Migrated monolithic systems to microservices and serverless architectures, improving scalability, fault tolerance, and performance.
- Automated infrastructure provisioning with Terraform and CloudFormation for repeatable, consistent deployments.
- Implemented observability, monitoring, logging, and security using CloudWatch, X-Ray, CloudTrail, GuardDuty, and AWS Config.
- Supported ISO 27001 compliance, cloud governance, incident response workflows, disaster recovery strategies, and enforced cloud cost controls and tagging.
- Mentored junior engineers and contributed to internal DevOps standards and documentation.

Selected Projects

The Nursery App (TNA)

Re-architected a monolith into an event-driven serverless system using AWS Lambda, SQS, Step Functions, and DynamoDB. Automated deployments, implemented secure configuration management, observability, rollbacks, and multi-environment operations. Implemented Redis caching to improve API response times and reduce database load. Improved deployment speed by 40% and reduced service latency by 25%.

YANI – AI-Powered Compliance Platform

Led Azure infrastructure using Terraform and Azure DevOps pipelines. Deployed and operated React and Node.js workloads on Azure VMs and App Service. Implemented secrets management with Azure Key Vault and centralized logging with Azure Monitor for AI-driven workflows. Managed enterprise networking using NSGs, security groups, and route tables. Enhanced uptime to 99.95% and accelerated release cycles by 30%.

USF – Universal Service Fund (Phase 1 & 2)

Phase 1: Deployed Laravel application on ECS with CI/CD automation.

Phase 2: Built a serverless data platform using Lambda, DynamoDB, S3 data lake, Athena, and Power BI with strict IAM, backup, and disaster recovery controls. Reduced data processing time by 50% and improved analytics query efficiency.

Education

Bachelor of Science in Computer Engineering
COMSATS University, Islamabad | 2017 – 2021
CGPA: 3.34
